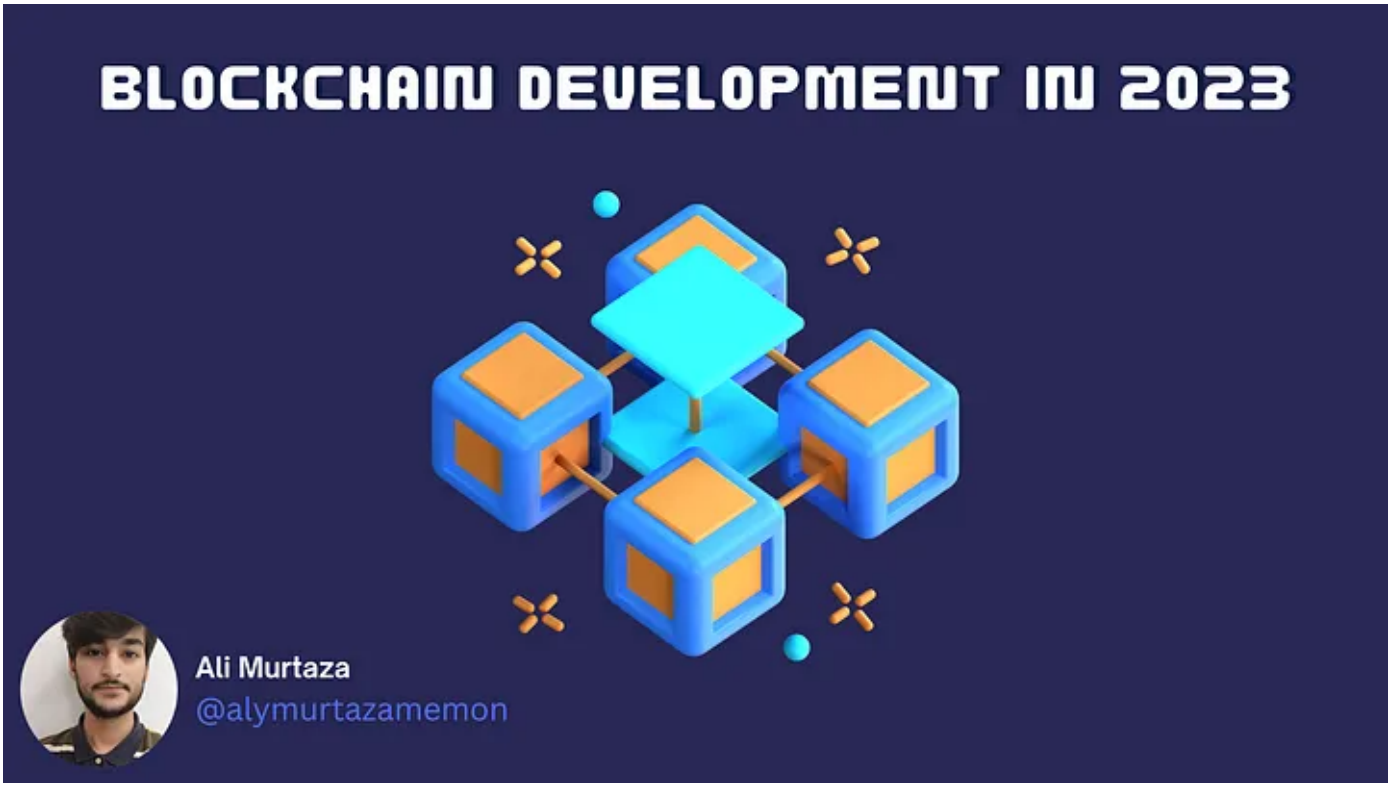
Best Resources to Learn Blockchain Development in 2023

Start from zero to become a highly skilled blockchain developer.

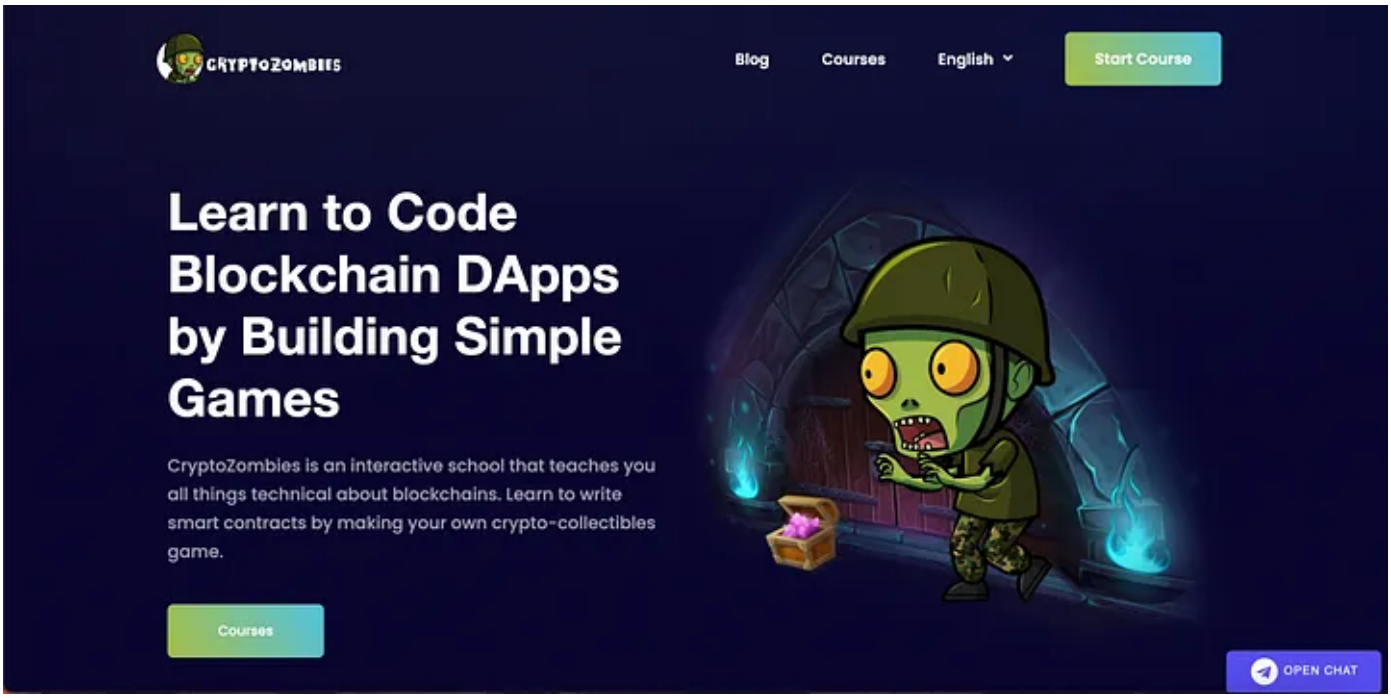


Blockchain technology is a decentralized ledger that records transactions between parties efficiently and in a verifiable and permanent way.

This is not just some future-tech buzzword: it's happening now, and it's changing the world.

I've put together a list of resources to help you learn about blockchain technology in 2023!

1. Crypto Zombies



Crypto Zombies

CryptoZombies is the largest education platform for blockchain development, it's been around for 4+ years, with over 400k registered users that have finished multiple courses.

CryptoZombies was the first tutorial on the internet for NFTs and is still very relevant to the new crop of web3 developers looking to enter the industry today. Currently, the CryptoZombies curriculum is mostly focused on Ethereum and Solidity development but is a lot of demand for content targeting other chains such as Binance, TRON, and even projects like Chainlink.

In-browser step-by-step lessons take you from the very basics of Solidity to creating your own fully-functional blockchain-based game. Even by the end of Lesson 1 (which

can be completed in one sitting), you'll know enough to officially call yourself a blockchain developer!

If you starting out with zero knowledge about Solidity, Tokens Standards and Blockchain, then you can start your blockchain development journey with Crypto Zombies courses. At the start, I would recommend you to just take 5 lessons of the **Solidity: Beginner to Intermediate Smart Contracts** course and then move on to the next resource I have mentioned to get the most in less time.

#1 Solidity Tutorial & Ethereum Blockchain Programming Course | CryptoZombies

CryptoZombies is The Most Popular, Interactive Solidity Tutorial That Will Help You Learn Blockchain Programming by...

2. Learn Blockchain, Solidity, and Full Stack Web3 Development with JavaScript — 32-Hour Course

Learn Blockchain, Solidity, and Full Stack Web3 Development with JavaScript — 32-Hour Course

After learning the basics of Solidity from Crypto Zombies you continue this course. This course will start with the Fundamentals of Smart Contracts and Why they are needed for the future. In addition to that, it will cover the basics of transactions, gas, accounts, etc.

This course will give you a full introduction to all of the core concepts related to blockchain, smart contracts, Solidity, ERC20s, full-stack Web3 dapps, decentralized finance (DeFi), JavaScript, TypeScript, Chainlink, Ethereum, upgradable smart contracts, DAOs, the graph, moralis, Aave, IPFS, and more.

After this course, you will be a Blockchain Wizard and ready to create any Decentralized Application you want.

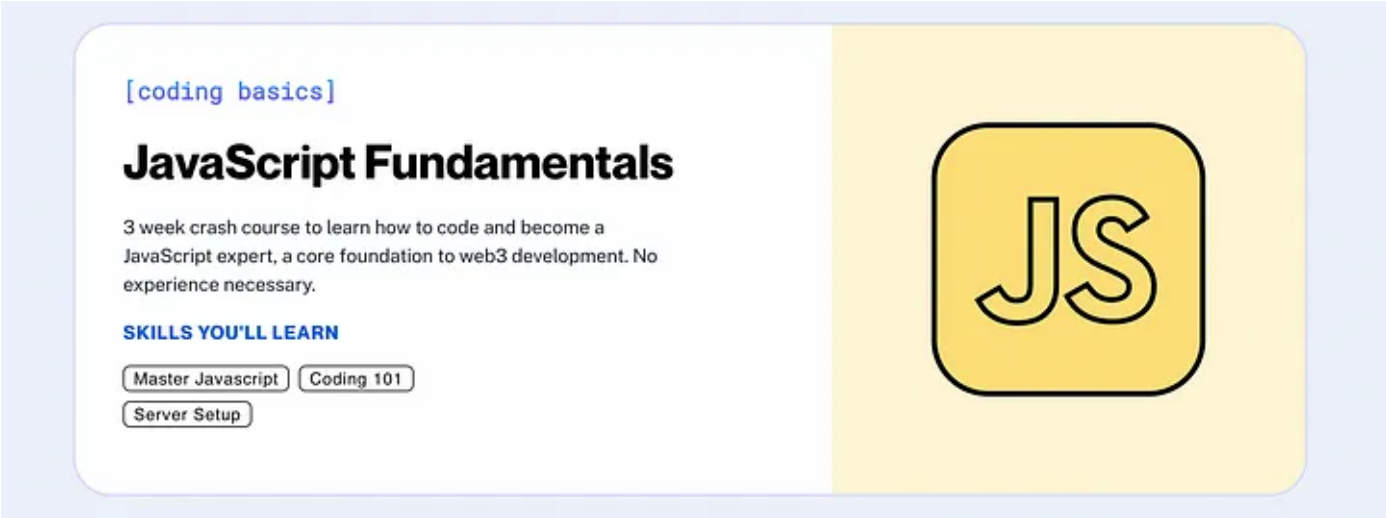
3. Alchemy University

Alchemy University

Alchemy University is the ultimate ecosystem for learning how to build and interact with web3. Their goal is to teach you everything you need to know to start building in web3, from hands-on, comprehensive bootcamps to starter code that expedites your workflow.

They are offering 3 different paths and you can continue with anyone based on your level of experience;

1. JavaScript Fundamentals

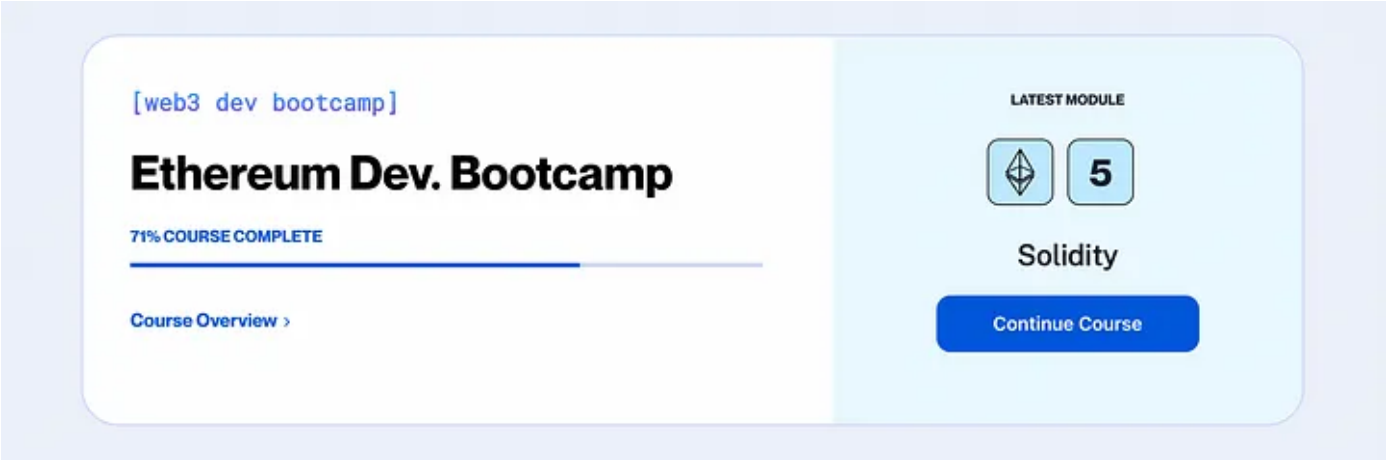


JavaScript Fundamentals

JavaScript foundation is very necessary in order to understand things and become a Blockchain Developer so if you do not know about it or lagging with some concepts then you can start this course first to build your foundations of programming and then continue Blockchain.

This JavaScript crash course covers the basics of programming through advanced topics like asynchronous requests and promises. The most used developer tools and libraries for Ethereum are JavaScript based, making it a key foundation for web3 development.

2. Ethereum Developer Bootcamp



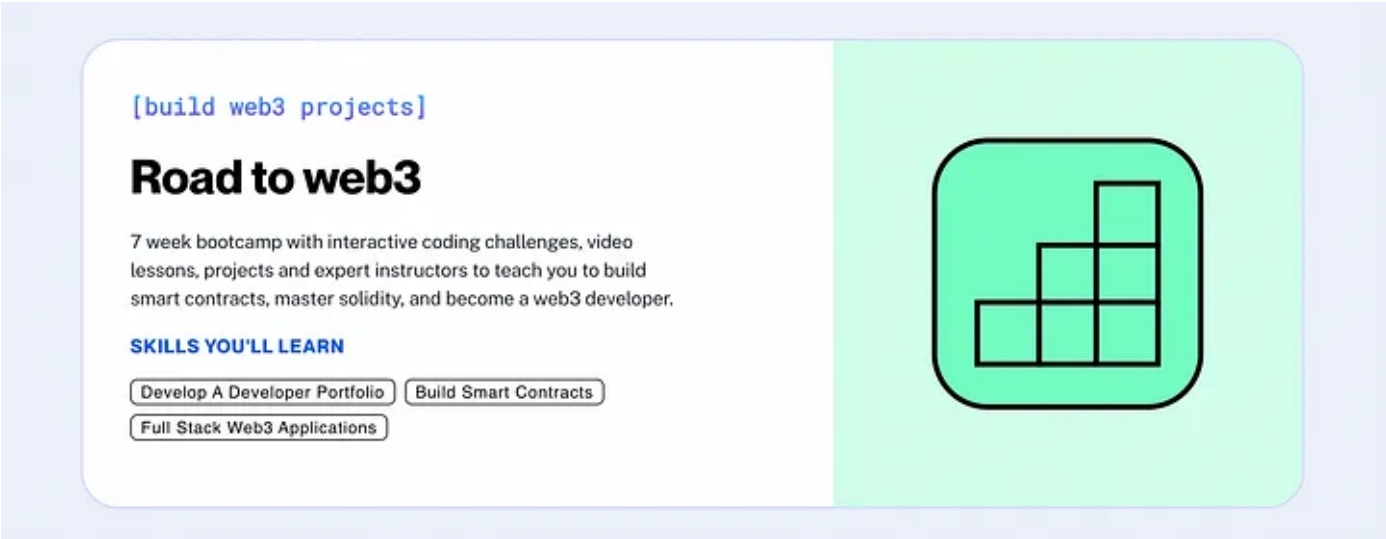
Ethereum Developer Bootcamp

This Bootcamp will take you from the ground up with strong fundamentals that will provide you with the ability to adapt to this rapidly evolving ecosystem. This Bootcamp places a heavy emphasis on learning by doing. You will build a full Proof-of-Work blockchain, many smart contracts and several decentralized applications.

Anything you learn conceptually, you will prove to yourself through coding exercises. They have crafted an IDE and collaborative classroom tool to provide you with the ultimate Bootcamp experience.

I personally recommend starting 3 lessons no matter your experience level, these fundamentals are super awesome.

3. Road to Web3



Road to Web3

Road to Web3 is a free 10-week program for learning Web3 development. You'll get to build dApps in DeFi, NFTs, Staking, and more!

This is an amazing course to learn and build the portfolio DApps for your future jobs.

Earn your web3 degree

Fast track your web3 career through courses, projects and code. Totally free.

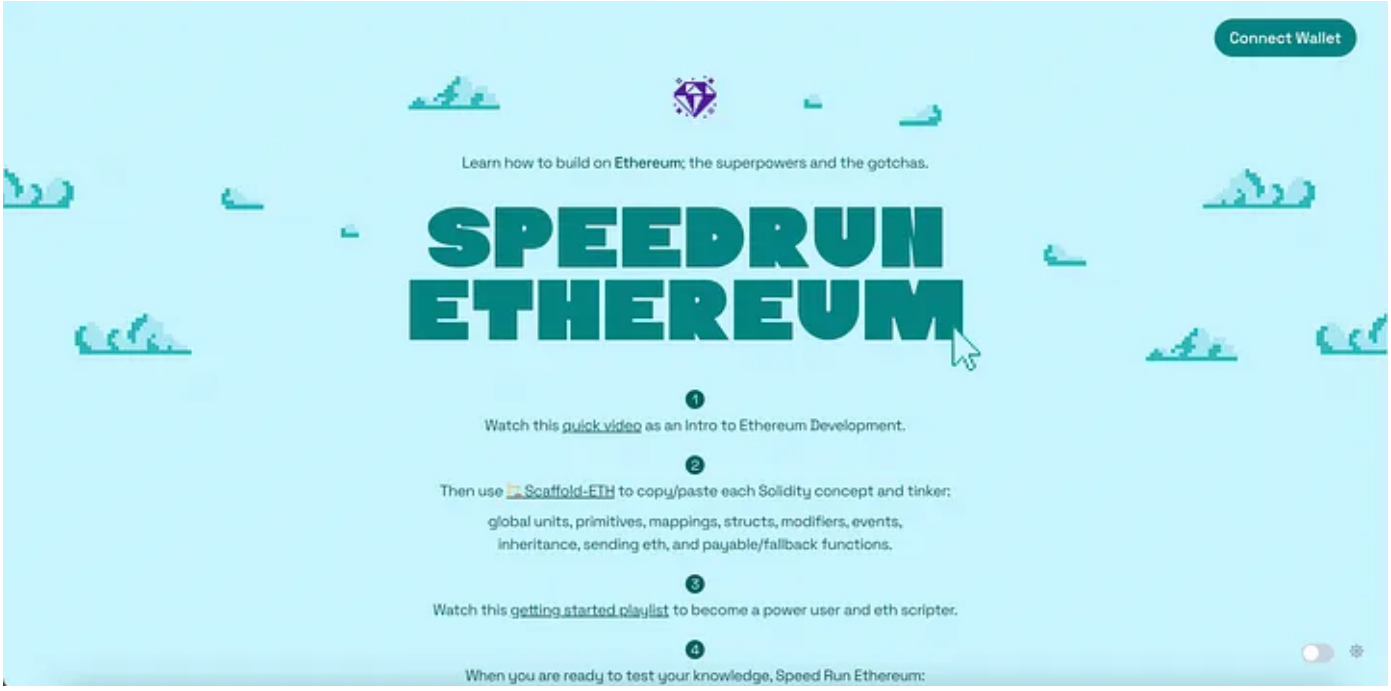
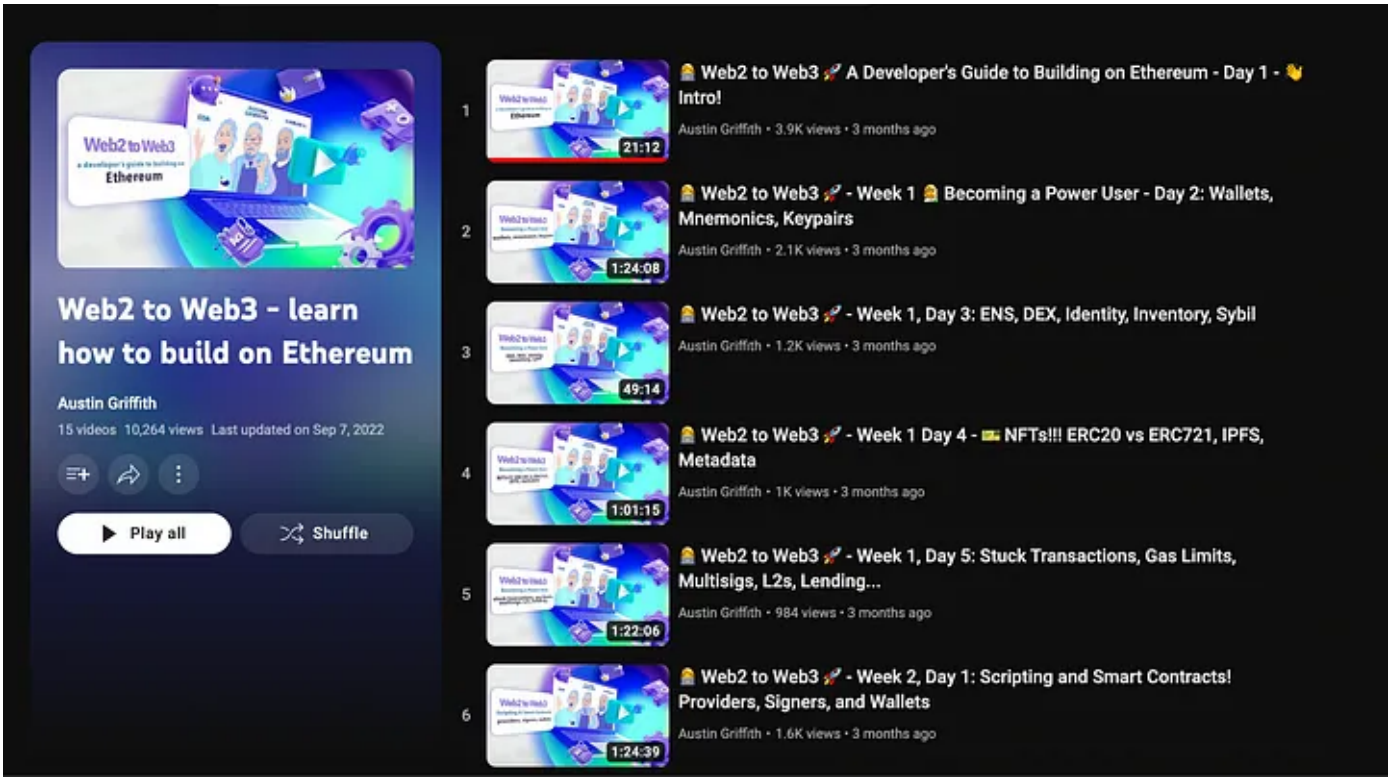
4. SPEEDRUN ETHEREUM



SPEEDRUN ETHEREUM

Speedrun Ethereum is a challenging based platform which gives you the option to learn by building quick projects on Ethereum. Some of the projects are **Simple NFT Example, Decentralized Staking App, Token Vendor, etc.**

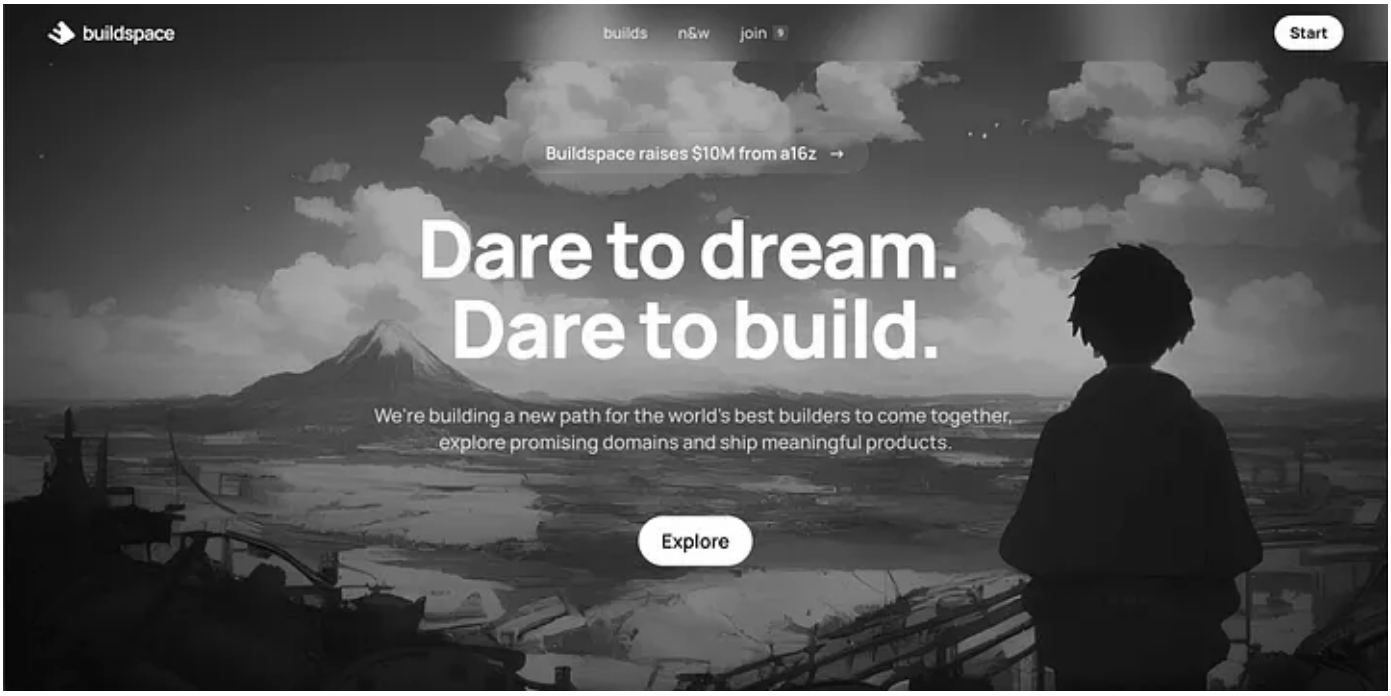
They have an amazing playlist on youtube that transitions you from **Web2 to Web3.**



Web2 to Web3 — learn how to build on Ethereum

Speed Run Ethereum Learn how to build on Ethereum; the superpowers and the gotchas. speedrunethereum.com	

5. Buildspace



Buildspace

Buildspace is another awesome platform which provides project-based learning on Ethereum and other different chains such as Solana.

It provides different courses such as **Intro to Solidity: Ship an Ethereum dApp, Build your own Ethereum NFT Collection, Build a DAO, etc.**

This is another awesome platform where you can build amazing projects for your portfolio that can help you get into the blockchain space.

buildspace

Explore promising domains and ship meaningful products. Backed by a16z + YC.

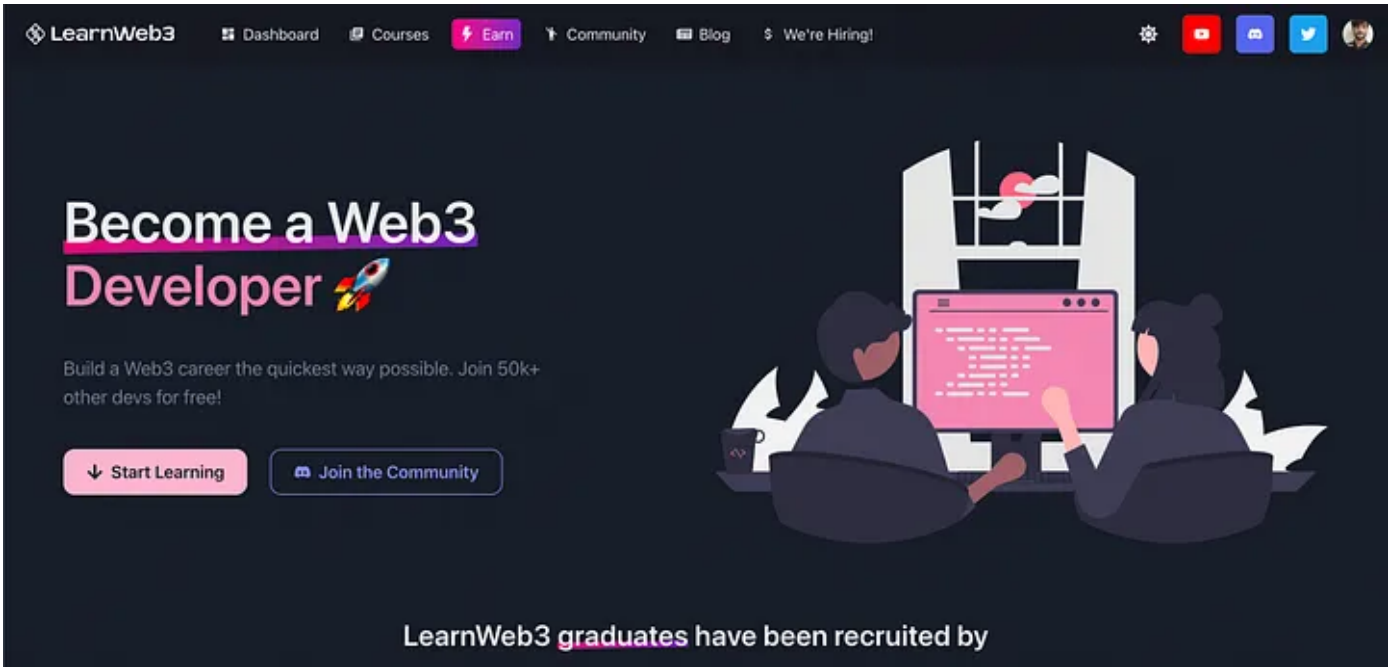
6. LearnWeb3



LearnWeb3

LearnWeb3 is another Web3 platform that provides different tracks for each level of developers out there. Each track contains many articles that cover tons of topics required for web3. If you are totally new you can start with their **Freshman** track which can provide a solid ground for your web3 journey.

They have other three tracks, **Sophomore, Junior, and Senior** which can help you learn advanced topics with the flow.

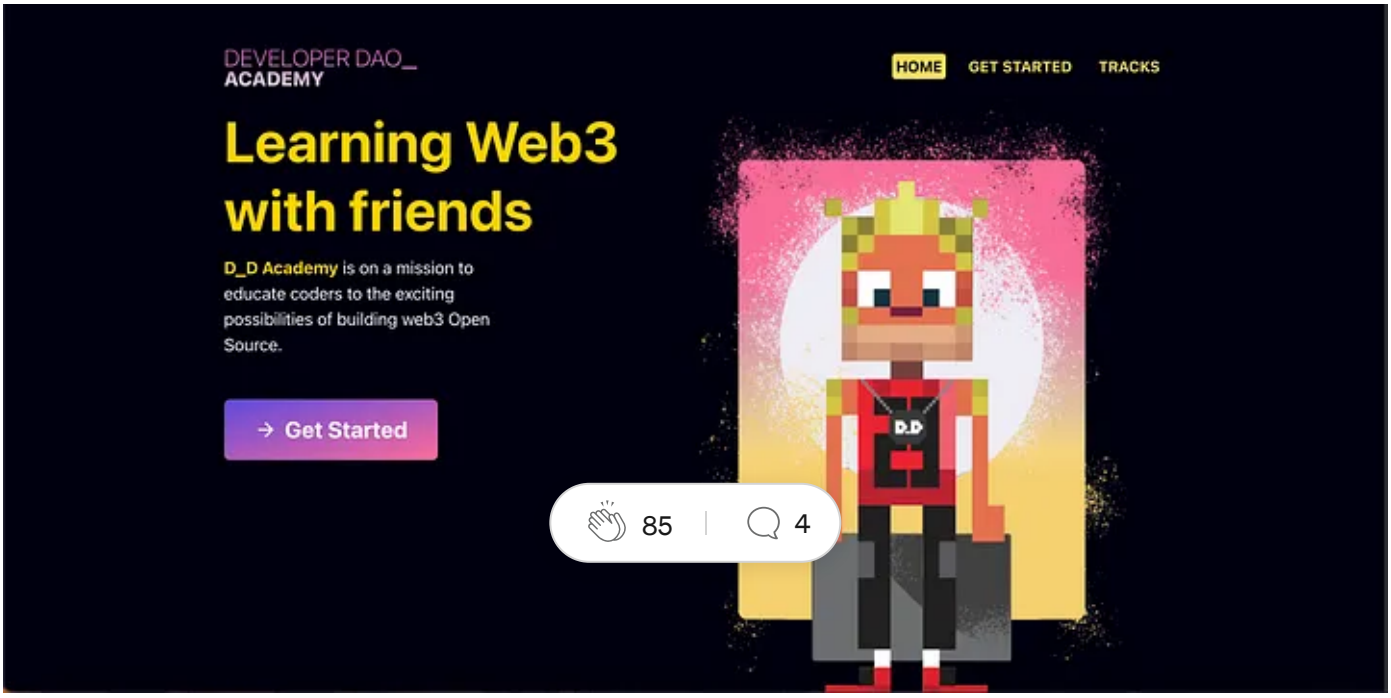
8. Developer DAO Academy



Developer DAO Academy

D_D Academy is an open-source education platform created by the Developer DAO.

They seek to empower learners with knowledge and tools that can be applied to real-world projects while promoting a healthy learning environment.

In addition to that, Developer DAO is one the best community out there, which can help you grow your web3 carrier along with other link-minded people.

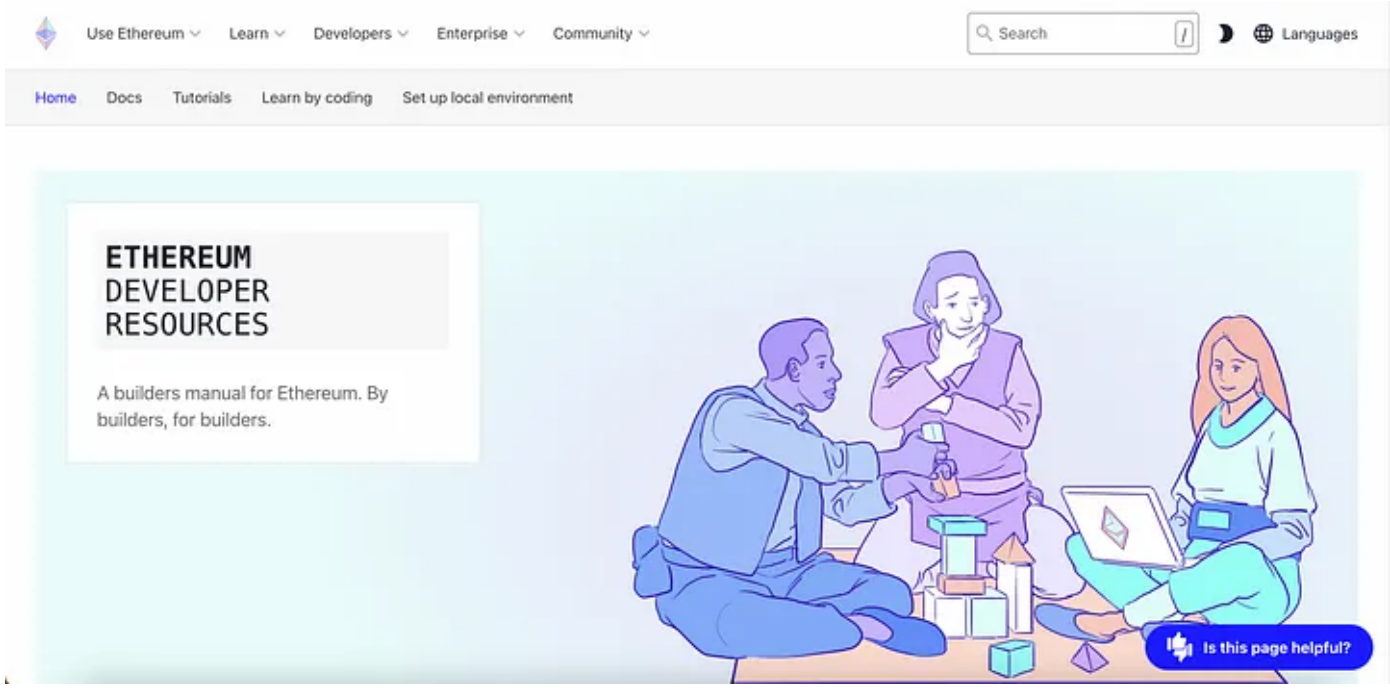
9. Ethereum Developer Resources



Ethereum Developer Resources

ethereum.org is the official website of Ethereum to help you build with Ethereum with the documentation on foundational concepts as well as the development stack. Plus there are tutorials to get you up and running.

Inspired by the Mozilla Developer Network, they placed great developer content and resources there. Everything here is open-source and ready for you to extend and improve.

Conclusion

Alright, so these were all the amazing resources that I know can create a great impact and give the push the start your blockchain development journey.

Definatly you do not have to go throw each and every resource I mentioned just explore and continue with the one which makes you feel interested. Every person is

different some likes to watch videos and some likes to read due to that I have mentioned all these for your choice.

Knowledge grows by sharing it with others! I have devoted my time to helping others out there with the knowledge and resources I have. Make sure to do the same and share this with the ones who are starting their carrier in the blockchain space.

Thanks
